## Who are we and why should you buy a Council Tool?

We provide **VALUE**. At Council Tool, we offer a complete line of heavy-duty, professional-grade tools — everything from axes, mauls and mattocks to striking, digging and firefighting tools. We design and build our products to the highest quality standards for professional tool users. We produce all of our own tools at our North Carolina manufacturing plant, which operates under all applicable U.S. labor and environmental regulations. We do not seek the economic advantages offered by cheap offshore labor and soft environmental regulations. We are committed to keeping jobs in our community. We are a trusted source.

When John Pickett Council founded this company in 1886, he did so because he was dissatisfied with the quality of turpentine harvesting tools available at the time. He began making his own tools and, as word spread about his tools' superior **VALUE**, he found himself in the tool making business. While mindful of the need to change with the times, we also believe that some things should remain constant. Our founder had a simple set of beliefs that he felt was necessary for success. We continue to operate by those beliefs:

- Manufacture a quality product.
- Offer **VALUE** by being an innovative and progressive manufacturer.
- Be straightforward and honest in your dealings.
- Be a good corporate citizen.

These core beliefs have guided our company for over 120 years and 4 generations. We have every reason to believe they will continue to serve us in the future. Today, Council Tool is still family-owned and owner-managed. The majority stockholders are on the plant floor every day. Our employees are hard-working Americans who take great pride in what they do. They have the skills and experience necessary to produce the **VALUE** that you are looking for. We forge only American steel, and we drive American hickory handles in our cutting and striking tools. Today our products are sold and used in most of the 50 states as well as abroad. Our tools are used by workmen in every walk of life.

### HOW TO SHARPEN AN AXE

We do not recommend an electric high speed bench grinder to sharpen your axe. This will leave the steel too soft to hold an edge and will ruin your tool. Most people today will not have access to an old style pedal grindstone, so your options are limited to a flat file and a whetstone. It is best to use a file with a guard because you will be filing towards the cutting edge. It is also recommended that you wear a pair of heavy gloves.

Clamp the axe to a workbench at a comfortable working height with the cutting edge facing out. File towards the poll (back) of the axe in a fan shaped motion and maintain the same direction throughout the process. File the edge approximately 2 to 3 inches at the middle point of the axe. Work your way from the cheek down to the actual edge, keeping a rounded profile. Stop filing once you have filed one side so that the burr of metal can be felt on the back side. Turn the axe over and repeat the process on the other side. The angle of the edge should be about 25 degrees, but should be slightly convex.

Now it is time to hone the edge with a whetstone. The honing process finishes and polishes the edge and removes the burr of metal left from the filing. Honing should always be done immediately after the filing process has been completed.

The last step is to apply a protective coating to the axe head itself. Wipe light machine oil over all the metal on both sides of the axe.

### TERMS and CONDITIONS

- All goods are **MANUFACTURED IN THE USA.**
- Terms are net 30 days.
- Cancellations must be in writing.
- All orders are accepted upon the condition that they will be billed at prices and terms prevailing at time of shipment. All agreements are contingent upon strikes, accidents, or other causes beyond our control.
- Returned goods will not be accepted without prior written notification. When authorized, returned goods must be shipped freight prepaid. A 20% restocking fee applies.
- Please check goods upon receipt and note any shortage on the bill of lading at delivery. Discrepancies or damage in transit are the carrier's responsibility, and related claims should be made promptly to the freight carrier.
- All orders received by phone must be confirmed by mail, fax or e-mail.
- Pricing is based upon standard packs; \$20 fee for non-standard pack order.
- **Minimum order is \$500.**
